

System-level metrics — combined agent fence (tool + harness)

agent columns = per-window values with the two fences' raw counts summed (instruction-weighted by construction) · SPEC = per-benchmark window-medians, one vote each, on the grey band · rotated label = column median · violin outline thin black; whisker = 5th-95th pct, thick black bar = IQR, white square = median, black circle = mean · hue = language (locked palette)
